## Use of Force Incident Reporting

### **Data Set Overview and History**

The Department of Justice (DOJ) Criminal Justice Statistics Center (CJSC) collects information on use of force incidents that result in serious bodily injury or death or involved the discharge of a firearm. In late 2015, the California legislature passed Assembly Bill (AB) 71, adding Government Code (GC) section 12525.2. Effective January 1, 2016, all law enforcement agencies (LEAs) were required to begin collecting data on use of force incidents for submittal to the Department of Justice (DOJ) beginning January 1, 2017.

### **Statutory Authority**

The DOJ has the statutory authority to collect use of force data pursuant to California Government Code section 12525.2.

### **Data Characteristics and Known Limitations**

1. The data contained in URSUS is narrowly defined and does not represent the totality of use of force incidents that occur in California. LEAs are only required to report use of force incidents that result in serious bodily injury or death of either the civilian or the officer and all incidents where there is a discharge of a firearm. As such, caution must be used when using the data for comparisons or in calculating rates.
2. 2016 represents the first year of data collection and reporting. While every effort was made to provide access to all LEAs in the state, not all agencies reported. Additionally, there could be inconsistencies in reporting during the first year as training and outreach efforts are ongoing.
3. The URSUS system allows for multiple value selection for several data elements. The raw data file contains all values submitted for each data element. There is no order to the display of multiple selections, rather it's how the system exports the data.
4. For publication and statistical purposes, if multiple values are reported, a hierarchy of severity is used to identify the most severe value. Please reference the URSUS, 2016 Appendix for more detailed information regarding hierarchy. For individuals where multiple race/ethnic groups were selected, the race/ethnic group was converted to "multi-race".
